Introduction to Shibori Dyeing
Tutorial #4: Itajime Clamp Resist Dyeing

Traditionally, *itajime* clamp resist dyeing was done with folded fabrics clamped between wooden boards bound with string. However, this tutorial experiments with other items that compress the fabric tightly.

You will need:

- PFD (prepared for dyeing) cotton fabric OR light coloured cotton fabric that has been washed in hot water ready for overdyeing
- Pegs or clamps that compress tightly
- Coins, perspex resists* or other flat plastic shapes
- Soda ash solution**
- Procion dye solution(s)**
- Rubber gloves
- Plastic Containers

*I purchased the perspex resists (pictured) from [www.etsy.com/shop/r0ssie](http://www.etsy.com/shop/r0ssie)

Method

- Fold and clamp fabric – either with or without resist shapes
- Pour soda ash solution over fabric so as to soak the non-clamped fabric. Pour off excess solution (this can be stored and used again).
- Pour dye solution(s) over the soda ash-soaked fabric. Use enough dye solution to saturate the fabric but it doesn’t need to be flooded.
- Leave to batch for at least two hours but preferably overnight.
- Pour off excess dye into the sink – this dye is exhausted and CANNOT be reused.
- Leaving clamps in place, thoroughly rinse in cold water.
- Remove the clamps and any resists for further washing by hand or machine.
- Start with a cold water rinse and end with hot water (a dash of dishwashing detergent is optional).
- Ensure that the water runs clear at the end of the rinsing and washing process.
- Dry, iron and admire!
Examples of Simple Coin & Peg Clamp Resists

Example of a pattern created with simple peg clamp resists

**Once in a Blue Moon** was created with Perspex shapes and C-clamps. The clamps were not tight enough and soda ash solution and dye leached into the resist area to create an indistinct circle.

Such is the serendipity of shibori!
